Big Brother Platform Data History Usage

August 2019

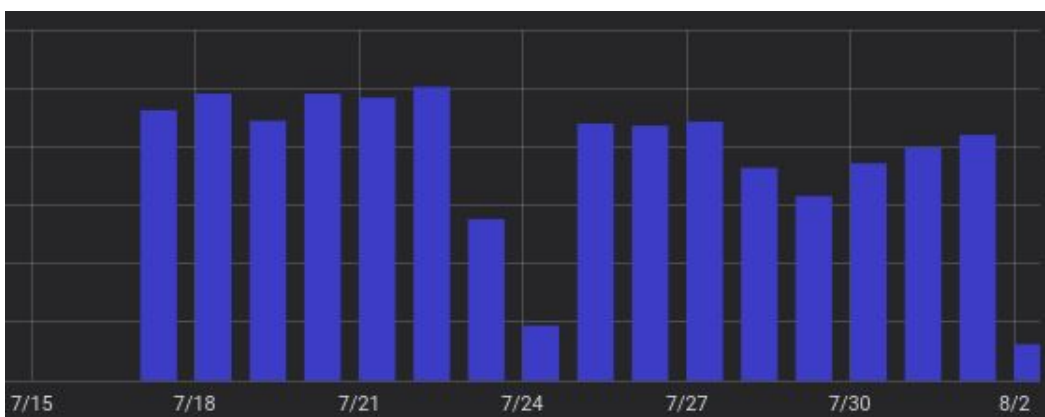

How to use the History Graphs:

Visual Guide

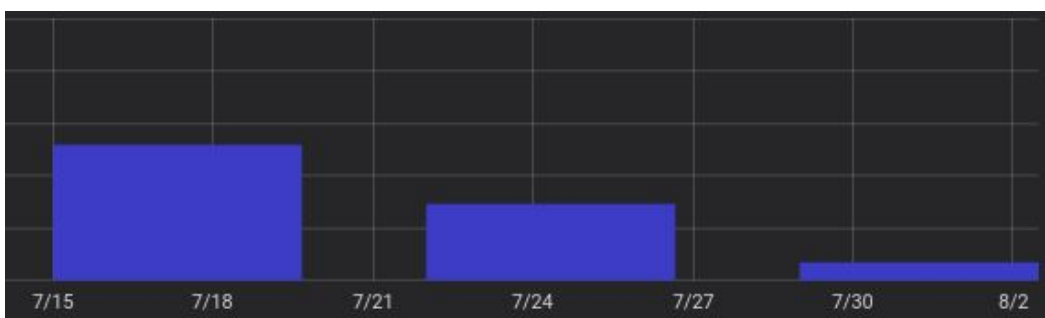

1) History Interval Selector

- Allows a user to select how large/small the intervals are between data points:

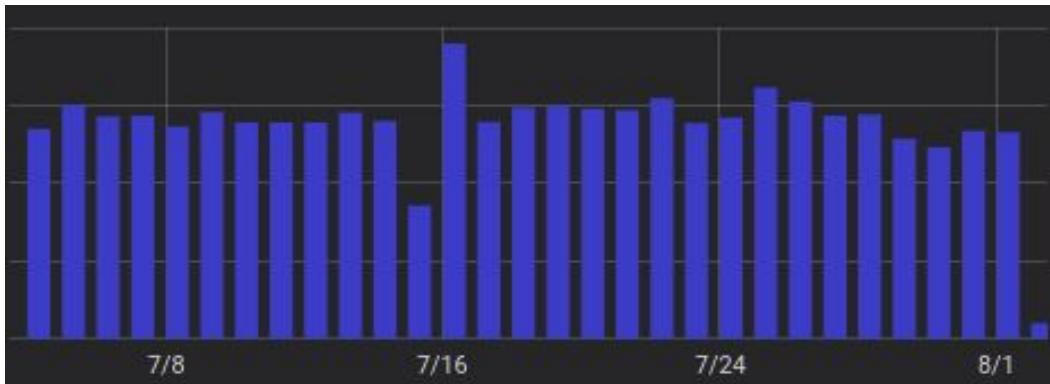

- The above is a part of a graph which has the History Interval selector set to 1 day intervals.

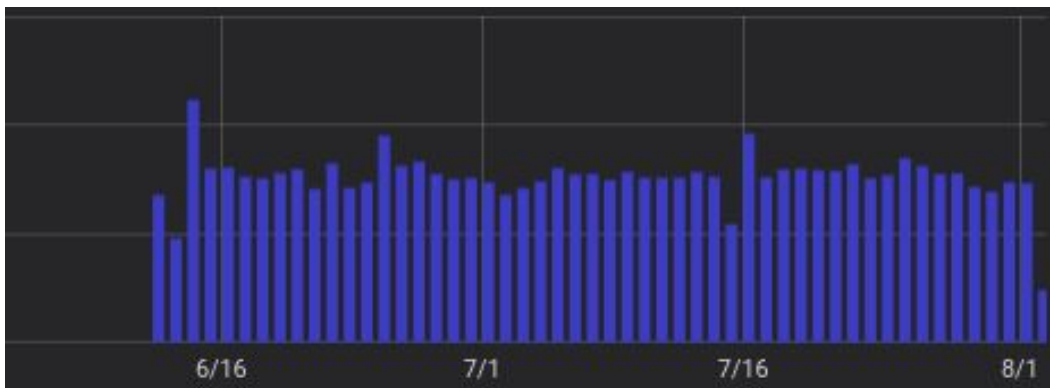

- The above is a part of a graph which has the History Interval selector set to 7 day intervals.

2) History View Window Selector

- Allows a user to select how far back the displayed history should be. 30d

- The above is a part of a graph which has the History View window selector set to the previous 30 days.

- The above is a part of a graph which has the History View window selector set to the previous 60 days.

Using the History Interval and History View Window selectors

When a user requires the history of a value two variables need to be considered:

1. How specific value(s) need to be.
2. How far back (roughly) they would like to view.

In order to retrieve the history - a user should first set the interval of the data (i.e 7 days) to view the data in 7-day-sized-parts.

Once that is complete, the user should select how far back they would like to view (i.e 60 days) - this will allow them to see the previous 60 days of data.
