Purpose

This manual serves as a reference guide to the efficient usage of the Big Brother Platform. This manual is a useful aid to assist a user of the platform - if needed.

General (Important)

Detailed data

The values depicted on Big Brother are calculated, collected and some are averaged. The reason for this is to improve the performance and responsiveness of the platform, this being said, the exact value of every second/minute may not be available.

To view a specific data (on a graph which shows multiple values):

- *Click* the value you want displayed on its own (on the **legend** of the graph)
- To display a set of selected values (hold *CTRL* + *click* the values on the legend) this can also deselect values if not wanted.

Zooming and Resetting

In order to reset the values and graphs to their current status, set the time-window to 'Today'.

The time-window can be changed by selecting a '**Quick Range**', a '**Custom Range**', or by **selecting a timespan** on a graph.

Visual Guide

- | | |
|---------------------------------|---|
| 1) History Interval Selector | - Specifies the history interval |
| 2) History View Window Selector | - Specifies the history time-window |
| 3) Star Dashboard | - Add dashboard to Starred Dashboards |
| 4) Cycle View Mode | - Switch between <i>Normal</i> / <i>Fullscreen</i> / <i>Kiosk</i> |
| 5) Time-window selector | - Select ' <i>Today</i> ' to set graphs to standard view |
| 6) Time-range zoom out | - Increase shown data on applicable graphs |
| 7) Refresh Dashboard data | - Check if new data is available manually |
| 8) Select Refresh Interval | - Set automatic data refresh interval |

Overview Tab

Last Consumption Update

Elapsed time since latest data was sent from the Datakom monitoring device/platform. This value **does not change** if the time-window is changed, it is the latest value.

Total Consumption (gauge)

Shows how many kWh have been consumed currently, if the time-window is changed this will show how much was consumed from the beginning of the last day (within the time-window) up to the last time of that day.

Consumption (pie chart)

Shows the percentages and current of the 'zones' consumption since the start of that day. If the time-window is changed, the graph will show the current consumed during that period. However if the time-window is over a day, the values will represent only the amount consumed from the beginning of the last day (within the time-window) up to the last time of that day.

Mean Real-Time Consumption (pie chart)

Shows the percentages and current of the mean real-time consumption since the start of the day. If the time-window is changed, the graph will show the mean real-time consumption during that period. However if the time-window is over a day, the values will represent only the amount consumed from the beginning of the last day (within the time-window) up to the last time of that day (within the time-window).

Alerts

Alerts are displayed when:

- An irregularity is found
- A pre-set trigger is reached by a certain value/value pattern

Alerts consist of a:

- Name - Which describes the source (i.e Consumption etc.)
- Message - Gives additional information (if applicable)
- Date - The date and time of the alerts initial activation (when the alert)
- Relative Time - Elapsed time of alert being displayed
- Status - **PROBLEM** alerts are the only alerts which will be displayed here

Hourly Overview (graph)

Displays the hourly Total Consumption of the selected time-window.

Total Consumption (graph)

Displays the Total Consumption within the selected time-window.

Weekly Consumption (graph)

This shows the **current weekly consumption** if the time-window is changed, this graph will not show that time-windows values. To inspect the weekly consumption, reset the values (by selecting Today), once this is done, the weekly consumption will be depicted accurately.

Consumption Tab

Daily Consumption Overview

This shows the **previous 30 days consumption from today** if the time-window is changed, this graph will not show that time-windows values. Reset the values (by selecting Today), once this is done, the consumption will be depicted accurately.

Hourly Consumption Overview

This shows the hourly consumption of a selected time-window.

Total Consumption

This shows the total consumption of a selected time-window.

Total Real-Time Consumption

This shows the total real-time consumption of a selected time-window.

Detailed Units Consumption

These show the consumption (over the selected time-window) of the following:

- Lediba Load Shed
- Main Camp Top Office
- Generator
- Lediba 24 Hour
- Staff Load Shed
- Well Point+Solar Consumption
- Tent 8 to 5 Supply
- Total Camp

Detailed Units Real-Time Consumption

These show the consumption (over the selected time-window) of the following:

- Lediba Load Shed
- Main Camp Top Office
- Generator
- Lediba 24 Hour
- Staff Load Shed
- Well Point+Solar Consumption
- Tent 8 to 5 Supply
- Total Camp

History Tabs

Usage:

The History tabs use the **History View Window** and **History Interval** selectors in order to generate the graph.

- [Daily Overview](#)
- [Daily Consumption Overview](#)

Alert History Tab

Monitoring Alerts

Displays the currently **ACTIVE** alerts.

Alert History

Displays the history of all alerts.
